

# Capability Statement

## ***Core Competencies***

---

A-SCC is the preferred SDB contractor for Houston-area space systems contractors and for NASA small business contracts. A-SCC consistently provides exceptional products and services in support of NASA programs, brings the most experienced aerospace talent together to quickly meet NASA program challenges. Moreover, A-SCC's intent is to lead the Houston-area in aerospace science, technology, and education outreach.

## **Future Performance Targets**

---

NASA is retiring the Space Shuttle and scrapping the Ares/Constellation programs, displacing thousands of engineers and scientists with unique knowledge and expertise. By having these scientists and engineers available to support new NASA programs, space systems development knowledge is preserved, providing quick, low-cost solutions as fresh programs are developed. A-SCC can provide NASA and its contractor's use of this attainable pool of knowledge to efficiently develop innovative space systems.

## **Company History**

---

Founded by Beatriz Kelly-Serrato in 2006 as a DBA the company was incorporated in 2009, the idea to formulate this concept and niche to preserve as much of the unique aerospace knowledge came out of the concern to preserve this valuable knowledge base. There are three consultants currently working on this concept but we will grow within the next three to four months rapidly to start developing contracts to assist as many displaced aerospace workers as possible. A-SCC will be selective in the generation to collect the aerospace talent and consultants who becomes an A-SCC consortia member.

## **Company Registrations**
