

Automated testing checklist

Questions to Ensure Best Practices...

Use the checklist below when interviewing your custom software development firm to find out if their level of automated testing & deployment meets the standards that your project will need:

Automated Testing

- ☐ Does your partner use automation?
- ☐ Do they do both behavioral testing and unit testing?
- ☐ Do they have development standards such as "one test per user story"?
- ☐ What percentage of the codebase do your partner's tests cover?

Automated Deployment

- ☐ Does your partner release code to the production server?
- ☐ Can your partner do "backwards deployment" (moving data from production back to staging and development environments)?
- ☐ Is the process automated?
- ☐ Is "passed tests" a requirement to deploy?
