
Student Research Case Study

Problem Statement

Case Study Title

Introduction

- Briefly introduce the research topic and its significance.
- Provide background information relevant to the research area.

Problem Statement

- Identify the key research gap or issue the student is addressing.
- Define the specific research problem in clear and measurable terms.
- Mention why solving this problem is important for advancing knowledge in the field.

Objective of the Case Study

- Specify the research objectives or hypotheses.
- Explain what the student aims to discover or achieve through the study.

Scope

- Define the boundaries of the research (e.g., specific population, time frame, or data limitations).
- Mention the focus areas and any limitations of the study.

Key Stakeholders

- Include relevant stakeholders like academic institutions, researchers, or subjects involved in the study.

Expected Outcomes

- Outline the expected findings or contributions to the academic field.
- State how the results will help in addressing the research problem.
