

## STRAP SIZE GUIDE

This size guide and tape measure is created for you to measure your wrist size, so we can adjust the strap to make sure the watch fits you from the second you get your hands on it.

## PROCEDURE

1. Print out this page and cut out the ruler. Please make sure the printing settings are set to be 100% size and that no "fit-to" settings are enabled. To ensure the right size of the ruler, use a regular ruler or similar for comparing.
2. Put the ruler around your wrist and measure the size of it. It is a good idea to get a feel of how tight you want the strap to be and do your measuring according to this.
3. Now all you have to do is to submit your desired strap length when you order your wooden watch. If desired length does not match the exact size options available, please consider what size will give you the best result.

## NOTE

- Don't be scared of making incorrect measurements – everyone makes mistakes. On every purchase you will be provided with a pin adjustment tool, so you can perform the adjustment yourself as well.
- You will always be provided with the extra links from the strap. Wrong measurements and wrist size changes should never prevent you from wearing your watch.
- If you feel uncomfortable adjusting your watch strap by yourself, you can always go to your nearest watch technician or specialist. Of course you can also send us back the watch, to change the size for you – your only pay the shipping costs.
- If your size is not available in the standard size range when you order, please contact us. We are sure we can figure something out!
