

PRODUCT FACT SHEET

OnAsset Intelligence, Inc. leads with a suite of technologies built to withstand the rigors of shipping and the power to track shipments across the globe through all modes of transportation. Standards-based technologies make OnAsset products compatible, flexible and scalable.

SENTRY FlightSafe®

SENTRY FlightSafe reads data from Sentinels within a 1-400m range and relays that to the OnAsset INSIGHT platform. The SENTRY FlightSafe is the first in the industry to feature 5G connectivity, LoRaWAN® networking and audio-visual sensors. The SENTRY FlightSafe is revolutionizing the user experience, offering an on-device display to easily configure the device, view data, and support customized workflows. The combination of our unique device display and buttons makes it possible to set up and launch shipments without ever having to log into any software.

Sentinel Sensor

With a 5-year battery life, the Sensor is ideal for piece-level and facility monitoring. It collects sensor data and automatically transmits it to any SENTRY FlightSafe or mobile device running our OnAsset INSIGHT mobile app.

Sentinel Logger

Rugged, reusable and wireless, the data logger independently logs any sensor data, and automatically offloads data to a SENTRY FlightSafe or mobile device within range – no manual process required. The Logger can store over 16,000 data points with internal memory and a 1-year battery life.

Sentinel Anchor

The Anchor communicates with all the sensors in use to provide micro-location data, so the customer knows not only that it's in the right warehouse but that it's in the right location with other items from the same shipment, or that it's being stored under the right temperature, light, etc. conditions. It relays micro-level location information and ambient sensor information to any SENTRY FlightSafe or Sentinel tags in its vicinity.

NexBox®

Reverse logistics is key to supply chain sustainability. A solid reverse logistics strategy yields big business and environmental benefits. OnAsset knows its customers, and we understand that you don't have the time and personnel dedicated to managing the return and reuse of asset management devices. This is why we've developed NexBox, offering a turnkey solution to help you achieve maximum utilization of your SENTRY FlightSafe and Sentinel device fleet. NexBox is the industry's first automated Reverse Logistics solution that makes it easy to collect and reuse Sensors and Loggers, fully integrated with our suite of SENTRY FlightSafe and Sentinel products.

Connected Packaging & Customized Solutions

OnAsset is the OEM of all the solutions we offer, so we have the unique ability to integrate our products directly with our customer's packaging and assets to fully enable the connected supply chain. OnAsset's engineers can engage with you to sculpt solutions to your needs and seamlessly blend our unique technology with yours to create real competitive advantage.

OnAsset INSIGHT™ Platform

INSIGHT is a cloud platform that provides comprehensive features including shipment functionality, geofencing, device configuration, alerting management and control tower operations. OnAsset's standards-based technologies make it easy to integrate within existing systems and ecosystem partners. Our enterprise-grade platform and application programming interface (API) is field-proven and compliant with 21 CFR Part 11 and GxP monitoring programs, offering a secure and scalable solution to monitor, analyze and store shipment information.
