

Senior C++ Software Developer Full Time/Contract

Greetings!

We're looking for an awesome C++ developer to join our team and help us build the most polished and easiest to use test equipment in the world.

We're a small company and we're starting out on a very ambitious new product line. The product is going to be incredible, but there's an enormous amount of hard work between there and now and we could really use a brilliant C++ developer to help us get to the finish line!

About You

- You're a god among mortals when it comes to engineering. Sometimes you secretly smile about this fact. But you're also a really nice person.
- You're a cool, easy going, good person. Easy to get along with, and have a beer with.
- You care. You care a lot about things being done right, being done well. You have very high standards for yourself.
- You're willing to take just about anything on -- and figure it out one way or the other.
- Your knowledge of C++ goes fairly deep.
- You can focus and crank out code when you need too.
- You work well in a small team and you can convey your brilliant opinions and well-reasoned arguments without needing to have the final say.

Optional / Nice to have

- You're already a fan of Logic/Logic16!
- For you, working on this project is much more than a job. It's more like a mission. We're not sure why this is but maybe you have your own reasons, or maybe we can convince you.
- You're pretty well rounded. You've done embedded, web, mobile, PC side, managed teams, worked on hardware, maybe started your own company, etc.
- You would be good talking with customers on the phone, and you are willing to go the extra mile to provide great service.
- You're flexible on exactly how you get paid – i.e. maybe there are other things besides (or in addition to) a steady paycheck that could be interesting (like a loan, royalty, profit sharing, and/or equity)

About Us

We're a small, profitable startup based out of San Francisco; we've got about 4 people here and a handful of people working remotely in various capacities. Joe started the company in 2008 with the launch of the Logic product, and was joined later by his brother Mark. Both brothers have degrees in electrical engineering and are big believers in Apple design and fantastic user experience.

There's a massive amount of work to be done, and success is hardly guaranteed, but it's going to be an exciting challenge.

To Apply

First of all, if you're qualified and just want to find out a bit more, give Joe a call at 510-984-2463 x6. You can also email us at support@saleae.com.

Send a resume and/or anything else remotely relevant to jobs@saleae.com.
