

Persuasive Essay

BOTTLED WATER

Imagine 780 million people, more than twice the size of the United States population, because that is how many people rely on bottled water to stay healthy. Bottled water is something that is helpful all over the world. The positives of bottled water outweigh the negatives.

Bottled water is convenient and accessible. When someone has a sporting event they can grab a bottle of water and be set for the event. If someone is on a long drive a bottle of water could quench their thirst. It is very easy to grab on the way out the door.

Secondly, the United States depends on bottled water more than most think. In the United States a growing problem is obesity. Bottled water helps decrease obesity by being an option instead of sugary drinks. However, if it was taken off the shelves, the sugary substitute alternatives— such as soda, energy drinks, and sweat tea— would likely sky rocket.

Banning water bottles altogether is not an option. Too many people and communities depend on bottled water. As many as 780 million people require it because their tap water is not clean enough to drink.

Bottled water is too helpful to get rid of. Too many people rely on it for their daily drinking water. In addition, it helps curb obesity because it's convenient and accessible. The pros are much bigger than the cons.

Bottled water is convenient and accessible. When someone has a sporting event they can grab a bottle of water and be set for the event. If someone is on a long drive a bottle of water could quench their thirst. It is very easy to grab on the way out the door.

*Claim/
Reason #2*

Secondly, the United States depends on bottled water more than most think. In the United States a growing problem is obesity. Bottled water helps decrease obesity by being an option instead of sugary drinks. However, if it was taken off the shelves, the sugary substitute alternatives— such as soda, energy drinks, and sweat tea— would likely sky rocket.

*Claim/
Reason #3*

Banning water bottles altogether is not an option. Too many people and communities depend on bottled water. As many as 780 million people require it because their tap water is not clean enough to drink.

*Restate
the thesis*

Bottled water is too helpful to get rid of. Too many people rely on it for their daily drinking water. In addition, it helps curb obesity because it's convenient and accessible. The pros are much bigger than the cons.

Beginner's Argument

BOTTLED WATER

Some people believe there are too many problems with bottled water, including they are unnecessary and cause a lot of waste in landfills. But imagine 780 million people, more than twice the size of the United States population, because that is how many people rely on bottled water to stay healthy. Bottled water is something that is helpful all over the world. The positives of bottled water outweigh the negatives.

Bottled water is convenient and accessible. When someone has a sporting event they can grab a bottle of water and be set for the event. If someone is on a long drive a bottle of water could quench their thirst. It is very easy to grab on the way out the door.

Secondly, the United States depends on bottled water more than most think. In the United States a growing problem is obesity. Bottled water helps decrease obesity by being an option instead of sugary drinks. However, if it was taken off the shelves, the sugary substitute alternatives— such as soda, energy drinks, and sweat tea— would likely sky rocket.

It's true that people could refill bottles of water taken from home. This would reduce the lingering plastic and pollution.

However, banning water bottles altogether is not an option. Too many people and communities depend on bottled water. As many as 780 million people require it because their tap water is not clean enough to drink.

Despite the cons, bottled water is too helpful to get rid of. Too many people rely on it for their daily drinking water. In addition, it helps curb obesity because it's convenient and accessible. The pros are much bigger than the cons.

Persuasive Essay

BOTTLED WATER IS THE BEST OPTION

The issue of recycling paper, plastic, and other materials is constantly being stressed to the members of our present-day society. If everyone helped to recycle bottles from bottled water, it would make a tremendous difference. There are countless reasons why it should exist and it should not be banned from communities.

Bottled water is a great, healthy alternative to high-calorie soda and sweet tea. These sugary beverages directly lead to obesity. If more people drank bottled water instead of a fattening drink, the obesity rate would decrease. If this happened, the nation would be healthier overall.

Any pollution from discarded water bottles can be eliminated with a recycling center.

Most importantly, bottled water is the *only* safe option for many people. If some were forced to drink water from their local taps, they could contract many severe illnesses or diseases, many which could lead to their deaths. The banning of bottled water would leave them with no choice but to drink the unhealthy water. Within these communities, bottled water provides safe drinking water for 780 million people. They are extremely necessary.

Although some want to ban bottled water, the research shows the advantages of bottled water outweigh the disadvantages. It is more convenient, it is a healthy alternative, and most importantly, it is the only safe option for some people. The community should not ban bottled water!

BOTTLED WATER IS THE BEST OPTION

The issue of recycling paper, plastic, and other materials is constantly being stressed to the members of our present-day society. If everyone helped to recycle bottles from bottled water, it would make a tremendous difference. Despite the benefits, many people claim that bottled water should be banned. There are countless reasons why it should exist and it should not be banned from communities.

Bottled water is a great, healthy alternative to high-calorie soda and sweet tea. These sugary beverages directly lead to obesity. If more people drank bottled water instead of a fattening drink, the obesity rate would decrease. If this happened, the nation would be healthier overall.

Despite this healthier option, some people argue that bottled water takes up too much space in landfills. They also say that once they are in landfills, they contaminate our waterways.

However, this pollution can be eliminated if the government created a safe place for the water bottles, such as a recycling center, there would not be the dilemma of where bottles could end up.

Most importantly, bottled water is the *only* safe option for many people. If some were forced to drink water from their local taps, they could contract many severe illnesses or diseases, many which could lead to their deaths. The banning of bottled water would leave them with no choice but to drink the unhealthy water. Within these communities, bottled water provides safe drinking water for 780 million people. They are extremely necessary.
