

ATOMIC STRUCTURE WORKSHEET

What does an atomic structure tell us about an atom?

- It shows how protons and neutrons are arranged in the nucleus.
- It tells how electrons move in energy levels.
- It shows how the atomic mass is determined.

Which subatomic particle is negatively charged?

- Proton
- Electron
- Neutron

What is the nucleus of an atom made up of?

- Only electrons
- Protons and neutrons
- Protons and electrons

Which of the following is the lightest subatomic particle?

- Proton
- Neutron
- Electron

Which element has 11 protons in its nucleus?

- Lithium
- Sodium
- Magnesium
